

Utilities

There are 4 utilities file in this directory, they are:

- `eve_mongo_utility.py` : utility for mongoDB document insert / query / delete / update / replace.
- `faas_function_call_utility.py` : utility for function call between FaaS functions
- `general_utility.py` : utility for pretty JSON and load secret from Docker Swarm
- `product_info_utility.py` : utility for insert product info into database.

These utilities, together with the handler of each FaaS function, finish the bot's operations.
