Eve

This repo is related with `Running Guide` `Part 2.5`

[MongoDB](#) is used as the database. To operate it, we use the REST API framework Eve to offer support for MongoDB.

The code offered is very simple, running on port `5000`, without auth.

mongo_eve.py

The script for starting Eve.

settings.py

The setting of Eve. In this setting, we set the following parameters:

- Port of MongoDB: `27017` (Default)
- DB to be connected: `db_faas_bot`
- HTTP method allowed for Resource (Collection) and Item (Document)
- Two unconstraint collection: `product_info` and `session_info`

Dependencies

```
$ pip install eve
```

or

```
$ pip install -r requirements.txt
```

How to Run

To start the Eve, use:

```
$ python mongo_eve.py
```
